

Rental Screens in Germany

XL Video chose displayLED's digiLED T8 TILE. Mounted on a Jans Creacar 3.5 ton trailer, the T8S panels offer superb image quality and colour reproduction in a package that can easily be transported and utilised in even the smallest outdoor corner.

Comprising 130 panels of T8, the 16mm/virtual 8mm screen measures 5.2 x 3.0m and is the biggest aspect ratio that can be mounted on this size of trailer. Quickly deployed, it can be turned to face any direction, ensuring that audiences get an excellent view, wherever the trailer is positioned.

"The new screen is part of an upgrade of our trailer fleet. It answers our customers' demands for higher resolution and provides a 16:9 aspect ratio in a 16m² size, but within a 3.5 ton weight limit", says XL Video GmbH's Denis Papin.

"The screen looks great and the demand for it is phenomenal. It has already provided a great return on our investment and customer demand for similar image quality means that we will no doubt be investing in further such trailers."
